PLUGS VS. BAREROOT STOCK...Do You Know the Difference?

Plugs are seedlings with soil still attached to their roots. They tend to be better adapted to harsher conditions and they are less likely to dry out during planting. But, they are more expensive and often smaller than bareroots.

Bareroot seedlings cost less to buy, they tend to come in larger sizes, and there are more varieties available on the market.

More About The SWCD Annual Tree Sale Program

Tree distribution dates: Trees will be available for pick-up in Baudette in early May. You will be notified two weeks in advance of times, dates and location. Arrangements for cold, long-term storage must be made in advance.

Quantities are limited, orders accepted until stock is depleted. Refunds only if desired trees are unavailable. Size may vary depending on nursery availability. **No cancellations after March 15th.**

The SWCD is not responsible for tree survival or replacement. Due to the perishable nature of tree seedlings, we cannot guarantee survivability or replacement. Tree seedlings must be kept in a cool, moist environment until planted.

Shrubs/Small Trees	Growth Rate	Mature Height	Spacing Between trees x Between rows	Sun	Site Suitability	Comments
Chokeberry, Black	Moderate	5-10 ft	3-8 ft x 10 ft	Full sun-partial shade	Sand-clay, moist but well drained	Good for pollinators and wildlife. Berries are edible. Suckers.
Crabapple, Red Splendor	Fast	20-25 ft	3-8 ft x 12 ft	Full sun	Sandy loam-clay loam, dry-wet soils	Beautiful pink spring flower, fruit persists all winter, not palatable to humans.
Dogwood, Redosier	Fast	6-12 ft	3-8 ft x 10 ft	Full sun	Sand-clay, moist-wet soils	White berries, pretty red bark, can be pruned.
Elderberry	Fast	6-12 ft	3-8 ft x 10 ft	Full sun-shade	Sand-clay, dry-wet soils	Great wildlife shrub, forage for deer in winter, not recommended around livestock
Juneberry	Moderate	4-6 ft	3-8 ft x 10 ft	Full-partial sun	Sand-sandy clay, Dry-wet soils	Berry producing, early flowering provides good pollinator habitat,
Lilac, Villosa	Moderate	6-12 ft	3-8 ft x 10 ft	Full sun	Sandy loam-clay loam , moist-wet soils	Late blooming, used for borders or wind-breaks
Plum, Prairie Red	Moderate	10-15 ft	3-8 ft x 10 ft	Full sun	Loamy sand-silty clay, dry-wet	Hybrid plum, white flowers, produces large plums, forms a thicket.
Deciduous Trees						
Maple, Silver	Fast	60-80 ft	8-20 ft x 16 ft	Full sun-partial sun	Sandy loam-silty clay, moist-wet soils	Large, flood tolerant tree.
Oak, Bur	Slow	60-100 ft	8-20 ft x 16 ft	Partial shade	Sand-clay, dry-wet soils	Sturdy, long lasting tree, good for wildlife, will tolerate wetter site conditions.
Poplar, Siouxland	Fast	70-90 ft	8-20 ft x 16 ft	Full sun	Sandy loam-clay, dry-wet soils	Fast growing with a medium life expectancy, shallow rooted, seedless cottonwood.
Coniferous Trees						
Cedar, White	Slow	30-60 ft	6-10 ft x 16 ft	Full sun-partial shade	Sandy loam-clay, moist-wet soils	Also called Arborvitae, good wildlife habitat, needs to be protected from browse.
Pine, Norway	Fast	75-100 ft	8-16 ft x 20 ft	Full-partial sun	Sand-silty clay, dry-moist soils	Does better in sandy loam sites. Salt intolerant. Deer browse is a moderate issue.
Pine, White	Fast	75-100 ft	8-16 ft x 20 ft	Full sun-partial shade	Loamy sand-clay loam, dry-moist soils	Excellent timber tree, soft needles, deer browse protection is a must, beautiful tree that's worth the effort.
Spruce, White	Moderate	50-75 ft	8-16 ft x 20 ft	Full sun-shade	Loam-clay, moist-wet soils	Windbreak tree, suits many sites.
Tamarack (Larch)	Fast	40-80 ft	6-10 ft x 16 ft	Full sun	Sand-clay, dry-wet soils	Beautiful fall color, fast grower and long lived.
